

N-TOX PREMIX

Toxin Binder

N-tox premix a toxin binder is a feed additive used in poultry diets to help bind and neutralize harmful substances, such as mycotoxins, heavy metals, and other environmental toxins. By doing so, these binders can reduce the absorption of toxins in the gastrointestinal tract, helping to protect animal health and improve feed efficiency.

COMPOSITION

HSCAS
Mold inhibitors
Buffered organic acid
Activated carbon
MOS with probiotic

INDICATION

- For protection against mycotoxins
- For Inhibiting the growth of mould
- For better growth, productivity & hatchability
- For better response of vaccination
- To reduce mortality
- For improved feed conversion rate

MIXING RATIO

1kg per ton of feed or as recommended by the veterinarian

Available
Pack
25 kg
